

Galfre GTS-280 Tedder

A tedder is an essential tool to have around when you want quality hay and a speedy production process. Tedders lift and turn the mown hay and spread it out. This action speeds drying and dissipates heat, sealing in nutrients as the hay cures and ensuring that mold and bacteria do not develop.

The **Galfre GTS-280 Tedder** is light-weight, efficient, and easy to use. It does not use hydraulics, and with a minimum of only 15 PTO horsepower required, virtually any tractor with a pull-type hitch and a PTO can operate it. Just connect the drawbar, attach the PTO shaft, and start tedding.

Unlike the competition, the GTS-280 strikes the perfect balance between light weight and quality manufacturing. If you read the specifications, you will see that cheaper tedders are lighter – they use less metal and lower quality materials. You will get greater value and fewer problems with the Galfre GTS-280.

Features include:

- Operable by any tractor with a pull-type hitch and a PTO with at least 15 horsepower
- Angle adjustment bar for setting your tedder at the optimal position
- No hydraulics required
- Superior Italian engineering and manufacturing quality
