CM 3-Point Forklifts

The Duplex line of compact hydraulic forklifts from CM is ideal for compact tractor owners who want a high-capacity, versatile lifting machine. Tractors have greater lifting capacity and increased strength at the back in comparison to the front of the tractor. That means heavier loads can be lifted more safely than with a front loader, and with less chance of damage to the tractor. Also, when hauling large items like big round bales, visibility is not compromised in transit.

Features:

- Rolled C-channel high grade steel mast for maximum strength and durability.
- Light weight and quality construction allow a greater maximum load capacity.
- Forks are easily folded up and secured in vertical position for compact transportation and storage.
- Retractable stand allows for convenient vertical storage.
- Locking pins ensure forks stay in place during use.
- Option to use hydraulic top link cylinder for tilt function.

Compact

SPECIFICATIONS:

		Compact	Utility
C	Max. lift height	63"	79"
H	Max. Height	55"	71"
L	Mast width	23.5"	25.5"
T	Ground clearance	8"	8"
E	Fork spread	24"	19.5 – 24"
D	Load center of gravity	16"	16"
Q	Max. capacity	1100 .lbs	2000 .lbs
-	Machine Weight	273 .lbs	529 .lbs
-	Hitch	3-Point, Category 1	3-Point, Category 1
