TX31 Mini Round Baler

A QUALITY MACHINE AT A LOW PRICE.

As a quality machine and the most affordable in the industry, the **Ibex TX31** finally makes haymaking independence possible for the hobby farmer. The Ibex mini round baler is the simplest, easiest to use mechanical baler on the market today and is as close as you can get to a “plug and play” baler. With the ability to produce 90 bales per hour, it's perfect for small operations of 5-20 acres.

YOU SPOKE AND WE LISTENED.

The Ibex TX31 mini round baler with NET WRAP is our flagship model machine that is the simplest, easiest to use baler on the market today. This is as close as you can get to a “plug and play” baler. It simply connects to the tractor's 3 point hitch, and its hydraulics are completely self-contained, meaning no messy hydraulic connections to deal with. It uses standard, inexpensive baler net wrap. The round bale is much more weather resistant than square bales, meaning a surprise rain shower or a heavy morning dew won't ruin your bales in the field before you can get them inside.

EASY TO USE AND EASY TO STORE.

The Ibex TX31 connects to the tractor's 3-point hitch which allows for easy maneuverability in tight fields and paddocks. Its light weight, compared to square balers and large round balers, also enables safer operation on sloping ground. Furthermore, its small size means it can be easily stored in the corner of the barn or shed.

REQUIRES ONLY MINIMAL HORSEPOWER TO OPERATE.

The Ibex TX31's hydraulics are completely self-contained, meaning no messy hydraulic connections to deal with. The TX31 Twine uses standard, inexpensive baler twine, either plastic or natural fiber, and can be run with any tractor of 15 horsepower or more. The TX31 Net can be easily run with tractors of less than 25 horsepower. And its small size means it can be easily stored in the corner of the barn or shed.

800 SOUTH 9TH STREET, TERRE HAUTE, IN 47807
